

## **ETHICS IN PUBLISHING**

*CORROSION* journal and AMPP have a zero-tolerance policy with ethical violations in scientific research and content creation. Articles submitted for publication must consist of the authors' original, unpublished work with appropriate attribution and citation to sources used. In order to protect the quality and integrity of the publication, AMPP Publishing expects all works published within to adhere to this policy.

### **Plagiarism**

Plagiarism is the act of using another's work or ideas without consent or authorization and passing them off as their own. This can include using words or phrases from another author's work verbatim, research without attribution, or using substantial elements from another author's work. Plagiarism is unacceptable and will not be tolerated by AMPP. Authors must ensure that all research is cited and referenced, and that all wording is their own.

### **Self-Plagiarism**

Self-plagiarism occurs when an author uses portions of work they have previously published without acknowledgement. Like plagiarism, self-plagiarism is unacceptable.

### **Redundant Publication/Multiple Publication**

Redundant publication occurs when an author submits or publishes the same research in substantially similar articles to different publications. This includes copying passages, failing to acknowledge previous works, and using different words to convey a substantially similar idea. This also includes publishing an article in different languages.

### **Acknowledgment of Sources**

Authors must ensure that all research is cited, referenced, and acknowledged. Any text copied word-for-word must be enclosed in quotation marks, cited, and referenced. Permission is required from the author or copyright holder if extensive passages are used. Reproducing extensive passages is discouraged.

### **AMPP Artificial Intelligence (AI) Policy**

Artificial intelligence (AI) tools, including chatbots and large language models (LLMs), do not meet the authorship requirements for AMPP and cannot be listed as an author on an article, paper, or other work. Likewise, AI tools cannot be cited as authors.

Authors may use AI tools to aid in creating their work; if used, authors must disclose the specific tool and the purpose for which it was used when they submit their work. For *CORROSION* journal and AMPP conference papers, the tool must also be disclosed in the paper or article in either the “experimental procedures/methods” or “acknowledgments” section, stating which specific tool(s) and version was used and how it was used. Authors should verify the accuracy, timeliness, and legality of all content generated by AI tools, as well as the materials used by AI tools to generate their outputs. Authors are responsible for the full content of their work, including the portions generated by an AI tool.

Authors should be aware that AI tools may reference the proprietary materials of others for their machine learning and content generation processes. As a result, Authors may be held responsible for AI-generated portions of their work which are found to be unauthorized or infringing.

As AI tools are rapidly developing, this policy will be reviewed and updated as needed, and AMPP reserves the right to modify this policy by posting a new version to this page.

### **Permissions**

It is a violation of U.S. federal law, Title 17 of the United States Code, to reproduce copyrighted works without express permission granted by the copyright holder. Authors must acquire written copyright permissions in order to reproduce any figures, pictures, graphs, diagrams, or other non-original work in their paper. This includes any work created by the author that has been published previously, as well as modified or derivative works. Requests for permission should be addressed to the copyright holder or to Copyright Clearance Center (CCC).

### **Green Open Access (Self-Archiving) – *CORROSION* journal**

*CORROSION* journal authors may self-archive their final submitted draft in their institutional repository with no embargo period from first publication. This version includes revisions made during peer review, prior to article acceptance. Fully-formatted articles may not be posted in repositories or on other websites unless the appropriate creative commons license (CC BY, CC BY-NC, or CC BY-NC-ND) has been acquired.

### **Preprints – *CORROSION* journal**

*CORROSION* journal allows authors to submit articles for publication that have been posted to a preprint server prior to submission. If accepted for publication, authors must upload the final submitted version as a revision to their preprint under a CC BY-NC-ND license. This version includes revisions made during peer review prior to article acceptance. Authors must also link to the journal article’s DOI or to the article’s abstract on *CORROSION*’s website.

### **Authorship**

Authors should ensure that all co-authors participated in the research and writing of the article

submitted for publication. All co-authors should be aware of the publication and should be listed on the article at the time of submission.

### **Libel**

Authors must ensure that there is no falsified or inaccurate data in their article. Articles must not include false, defamatory, or accusatory statements.

### **Erratum**

If a published article is found to contain an error, an erratum will be published in the next printed issue and will be linked to the article online.

### **Withdrawal – *CORROSION* journal**

Article withdrawal only applies to articles in peer review or published in the “Online Early” section of *CORROSION* journal online. These include articles that have been accepted for publication but are not in print-ready form and have not yet been assigned an issue number or page numbers. Online Early articles containing errors or raising ethical concerns (for example, plagiarism, questions concerning authorship, multiple submission) may be withdrawn. When an article is withdrawn, the html view of the content will be removed and replaced with text stating that the article was withdrawn according to the *CORROSION* policy on article withdrawal. The PDF will include a note before the full article stating that the article was withdrawn according to the *CORROSION* policy on article withdrawal.

### **Retraction**

After an article has been published in the final print ready form (either online or in print), with assigned issue and page numbers, an article cannot be withdrawn from publication but may be retracted. Article retraction is reserved for articles with serious ethical violations or errors. A retraction notice will be published in the next printed issue and will be linked to the article online. The html view of the article will be removed and replaced with the retraction notice. The PDF of the article will include the retraction notice above the article.
